

How to Collect a Home Hemodialysis-Self Collection (LTR76632)

Last Approved Time: 05/05/2023 Revision: 2.00

The following instructions are specific to Home Hemodialysis program patient who have been trained by Southern Alberta Renal Program staff.

How to prepare

To ensure accurate laboratory results, carefully follow the instructions.

Tests approved for collection

Albumin, Alkaline Phosphatase (ALP), Calcium, Complete Blood Count (CBC), Creatinine, Glucose, Hemoglobin A1c (HbA1c), Iron, Magnesium, Phosphate, Parathyroid Hormone (PTH), Potassium, Sodium, Urea

Risks or cautions

- Follow all instructions provided by your Home Hemodialysis nurse.
- Collect blood tube in the correct order.
- Follow instructions for labelling, spinning, storing and transporting the blood tubes.

Lab requisition

- Print the date and time blood was collected on each requisition.
- Write either "pre dialysis" or "post dialysis" on each requisition.
- Place a Self-Collection Label (Figure 3) on the requisition if a gold top tube is collected.
- DO NOT add other laboratory tests to the requisition unless directed by Home Hemodialysis.

Collecting the specimen

- Always collect tubes I this correct order:
 - 1. Red top tube
 - 2. Gold top tube
 - 3. Mint green top tube
 - 4. Lavender top tube
- Make sure the tubes are completely filled. It is important t then gently turn upside down (do not shake) 8-10 times to mix the blood.
 - o Leave the gold top tube at room temperature for 30 minutes then spin for 10 minutes.
 - o Spin the mint green top tube right away for 10 minutes.
 - o Do not spin the red top or lavender top tubes.
- Store all blood tube in refrigerator or cooler. Do not store on ice or in the freezer.

Labelling the specimen

- Improperly labeled blood tubes will not be tested.
- Label the blood tubes with the identification labels provided by your Home Hemodialysis nurse.
- Place a **PTH Tube Label** (Figure 2) on the gold top tube, if collected, as shown in Blood tube Information (Figure 1)
- Write the date and time of blood collection on the label: write "AM" or "PM" next to the time.
- If you do not have identification labels, then clearly hand write on the blood tube label:
 - o First and last name; must match the requisition exactly
 - o Provincial Health Number
 - o Date and time of collection; write "AM" or "PM" next to the time.

Data entry performed at DSC

Delivering specimen to lab

- Place the pre dialysis and post dialysis samples in separate re-sealable specimen bags.
- Place the matching requisition in the outside pouch of each bag.
- Place a Self-Collection Label (Figure 3) on the outside of the bag containing the gold top tube, if collected
- Place bags containing sample and requisitions in the transport container.
- Deliver samples to a Patient Service Center within 4 hours of the last blood collection.
- Go to the DynaLIFE Medical Labs website (www.dynalife.ca) for hours of operation.
- Make sure the transport container is returned to you.
